AGENTIC VC DOJO · MONTHLY ALL-HANDS

Agents at Work

Thursday · November 19, 2026 · 9:00 AM PT

In partnership with Kauffman Fellows

↓ to start

THE NEXT 60 MINUTES

Three things, in order

01	A whirlwind of Claude and ChatGPT updates, and how to think about using them	15m
02	Personal agents: wins, disappointments, show-and-tell	25m
03	The home connector idea, and how to get started	15m
04	Questions and what's next	5m

Fast today, on purpose. Two sessions in December go deeper.

01 · WHAT'S NEW

Six months, 68 releases.

Claude, ChatGPT, Claude Code, Codex and the models behind them, May to November. Every one is on the hub, linked to its source.

fullstack-vc.com/claude-gpt-release-timeline ↗

01 · WHAT'S NEW · MAY

Now you can: Hand an agent a goal that takes hours or days, and give your team shared agents for its workflows.

ANTHROPIC

May 28	Claude Opus 4.8
May 28	Dynamic workflows: hundreds of parallel subagents

OPENAI

May 21	Codex goal mode, Appshots, locked computer use
May 21	**Workspace agents generally available**

01 · WHAT'S NEW · JUNE

Now you can: Delegate from Slack or your phone, put tasks on a schedule, and fix a draft by pointing at it.

ANTHROPIC

Jun 9	Claude Fable 5 and Mythos 5
Jun 12	Edit Claude's drafts in place
Jun 23	Claude Tag: delegate to Claude in Slack
Jun 30	Claude Sonnet 5

OPENAI

Jun 2	Codex plugins for every role, plus Sites
Jun 4	ChatGPT memory that stays up to date
Jun 17	Scheduled tasks page replaces Pulse
Jun 18	Record & Replay turns demos into skills
Jun 25	Codex Remote GA: run Codex from your phone

01 · WHAT'S NEW · JULY

Now you can: Close the laptop: agents keep working in the cloud, and Claude can write to your Outlook, calendar and OneDrive.

ANTHROPIC

Jul 7	Cowork on web and mobile; M365 write access
Jul 10	Claude memory rebuilt as editable entries
Jul 24	Claude Opus 5

OPENAI

Jul 9	ChatGPT Work and the new desktop app
Jul 9	ChatGPT Sites public beta; Atlas retired
Jul 9	GPT-5.6 Sol

01 · WHAT'S NEW · AUGUST

Now you can: Share work by link with anyone, keep one memory across all your Claude work, and let Claude drive your browser.

ANTHROPIC

Aug 7	Auto mode becomes Claude Code default
Aug 19	New artifact sharing: open without an account
Aug 25	One memory across chat and Cowork
Aug 26	Claude in Chrome generally available

OPENAI

Aug 11	Import from Claude Code, Cowork and Cursor

01 · WHAT'S NEW · SEPTEMBER

Now you can: Ask any chat for a deck, doc or design; get agents that keep working between conversations; and ChatGPT with PitchBook and FactSet built in.

ANTHROPIC

Sep 16	**Cowork and chat become one Claude**
Sep 16	Designs, decks and docs in any chat
Sep 22	**Claude Opus 5.5**
Sep 28	Claude Sonnet 5.5

OPENAI

Sep 3	GPT-6 Astra
Sep 10	SharePoint, Box, Dropbox in ChatGPT Library
Sep 10	**ChatGPT for Financial Services**
Sep 10	Agents API: the Codex harness for developers
Sep 11	**Custom GPTs to be retired**
Sep 17	ChatGPT for Word
Sep 22	GPT-6 Sol and Luna in Work and Codex
Sep 29	**Dots: always-on agents in ChatGPT**
Sep 29	Space, Pages and a Meetings plugin
Sep 29	Codex Cloud

01 · WHAT'S NEW · OCTOBER

Now you can: Work in native Google Docs, Sheets and Slides, turn data into live dashboards and explainer videos, and manage it all from one Plugins page.

ANTHROPIC

Oct 6	Claude in Google Docs, Sheets, Slides
Oct 8	Claude Dashboards beta; Docs and Slides GA
Oct 8	Claude Motion: animated explainers (beta)
Oct 15	Nested sessions and a rebuilt desktop Code tab
Oct 21	Claude Duet research preview
Oct 29	One Plugins page for connectors and skills

OPENAI

Oct 7	**GPT-6 with Intelligent UI in ChatGPT**
Oct 16	ChatGPT Slides

01 · WHAT'S NEW · NOVEMBER

Now you can: Send Claude to the partner meeting, build the model and the whiteboard in chat, and run DCFs and memos on a finance-trained GPT.

ANTHROPIC

Nov 5	Enterprise security center and shadow-IT blocking
Nov 9	Claude Fable 5.2 and Mythos 5.2
Nov 10	**Claude Sheets, Whiteboards and Data**
Nov 10	Partner apps open inside Claude
Nov 12	**Claude Meetings (beta)**

OPENAI

Nov 10	Businesses in ChatGPT and Business Agents
Nov 17	**GPT-6.2 Astra and Sol**
Nov 17	ChatGPT for Sales
Nov 18	Dots on by default in Enterprise

01 · WHAT'S NEW · CLAUDE, FOR A FUND

Four Claude changes worth using this week

Cowork and chat are one Claude Sep 16

Hand over the data-room export; get back a first-draft IC memo and a summary deck, even after you close the laptop.

One memory, and you can see it Jul 10 · Aug 25

Claude keeps what it learns about your fund in Settings › Memory › Topics, editable. Sensitive topics stay out unless you opt in.

Docs, Sheets, Slides, and Google files Sep 16 · Oct 6

Decks, docs and models in any chat; native Google Docs, Sheets and Slides edited from Claude or inside the file.

Meetings, Data and Whiteboards Nov 10 · 12

Claude takes the partner-meeting notes; portfolio KPI dashboards on certified metrics that LPs can see live without your data access; a whiteboard that turns IC debate into owners and dates.

Five ChatGPT changes to know

ChatGPT for Financial Services Sep 10

PitchBook, Crunchbase, Preqin, FactSet, Capital IQ and Datasite built in, on GPT-6 Astra; it drafts models and memos in your firm's templates, with information barriers. Started with investment banking and equity research; sold to eligible institutions.

Workspace agents: build once, share with the team GA May 21

Describe the workflow and ChatGPT builds the agent; it runs on a schedule or from Slack and asks before sensitive steps. OpenAI's own example scores inbound leads, emails them and updates the CRM: swap leads for pitches and it's a deal-intake agent.

Dots: agents that keep working Sep 29

Its own cloud computer and browser, 4,000+ apps, and a memory that learns how you judge things. It acts on new evidence without being asked: rerun the portfolio model when a company's monthly update lands, and flag what changed. Rules decide what it may do alone.

ChatGPT Work, also inside Microsoft 365 Jul 9 · Sep 10–17

An agent that stays with a project for hours and hands back sheets, slides and docs; OpenAI says finance teams cut month-end close from days to hours. Plus a Word add-in and SharePoint folders: compare term sheets straight from the deal folder.

GPT-6, and now 6.2 for valuation work Oct 7 · Nov 17

GPT-6 answers with charts and small tools, but pick a higher reasoning level for real diligence. OpenAI says Astra works Financial Modeling World Cup challenges in Excel about four times faster than the winning human, and 6.2 is trained on DCFs, valuation workbooks and investment memos.

01 · WHAT'S NEW · ARTIFACTS, REBUILT

One chat, seven kinds of work product

Docs
living, shared documents

Slides
decks from a prompt

Design
on-canvas, your design system

Data
live dashboards, certified metrics

Sheets
formulas, tabs, export to .xlsx beta

Whiteboards
brainstorm with Claude live
beta

Motion
animated explainers, MP4
Team/Ent beta

They work in Claude Code too, and you can view and edit them on iOS and Android. Pre-Sep 16 chat artifacts are now "legacy": still shareable, no new ones.

01 · WHAT'S NEW · TELL YOUR IT PERSON

Four defaults changing under you

ChatGPT Dots are on for Enterprise since Nov 18

Unless an admin opted out. A dot can learn from connected apps unprompted, and disconnecting an app doesn't delete what it already pulled.

Claude Data turns on for Enterprise Fri, Nov 20

Unless an owner already saved a setting. Sheets, Whiteboards and Motion stay off on Enterprise until an admin enables them (Organization settings › Artifacts); on Team they're already on.

Custom GPTs are being retired announced Sep 11

Your "memo GPT" needs to move to a plugin.

Claude Meetings skips outside guests Nov 12

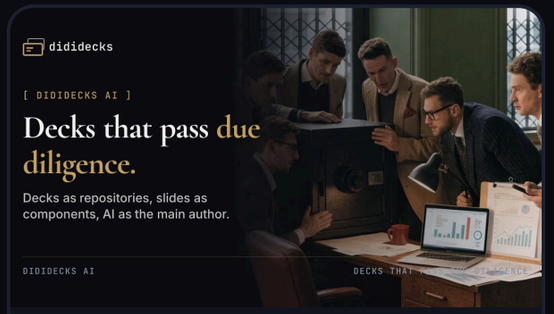
Founder pitch calls need an admin to allow external participants.

01 · WHAT'S NEW · A TAKEAWAY FOR THE BOLD

Ditch PowerPoint. Have Claude write the deck as code.

HTML, JS and SVG. Your brand as code, not a template. Live data and polls inside. Versioned, and shared as a link that opens without an account.

You're looking at one. This deck is a web page. And we build decks and memos this way for funds:



DidiDecks AI ↗

A code-first deck system: decks as repositories, slides as components, AI as the main author, with every claim sourced.

DidiDecks AI is Lossless Group's code-first slide-deck system for materials that have to survive due diligence....

`Decks-as-Code` `Presentations` `Due-Diligence` `Open-Source`

MemoPop AI ↗

Turn a company name into an institutional-quality investment memo, researched and fact-checked by 33 specialized AI agents.

MemoPop AI is Lossless Group's open-source investment memo orchestrator. Thirty-three specialized...

`Investment-Memos` `Multi-Agent` `Due-Diligence` `Open-Source`

01 · HOW TO THINK ABOUT USING IT

Eight habits of an agent-native VC

01 Use Claude Code and Codex, not just the chat

02 Write briefs and specs, not prompts

03 Put routine work on a schedule

04 Let models work in HTML, not .pptx

05 Experiment with enterprise context

06 Give it direct access: APIs and your browser

07 Automate your personal life

08 Create your firm's home connector

The guide, with examples and tools for each: fullstack-vc.com/guides/agent-native-vc-2027 ↗

02 · PERSONAL AGENTS

What worked? What let you down?

Instinct, Town, Grok Bot, Muse, OpenClaw, Hermes, and now the big labs' own: ChatGPT's Dots and Claude Duet. The group chat has been testing them on real lives for weeks.

- The moment it did something you didn't ask for
- Where it guessed wrong, or went quiet
- An errand it handled end to end
- Accounts it couldn't reach
- What you'd never give back
- What you turned off, and why

Background reading: fullstack-vc.com/guides/personal-agents-in-the-dojo ↗

02 · PERSONAL AGENTS

A win only counts once someone else can repeat it.

01 **Write it down as a brief or a skill:** what you asked, what it needed access to, what you checked.

02 **Share it where the group looks:** the chat for the story, the hub for the recipe.

03 **Add the tool to your stack** on your hub profile, so others can find who uses what.

04 **Put it behind your firm's home connector,** so the whole team gets it, not just you.

02 · SHOW-AND-TELL

Share your screen. Five minutes.

One thing your agent did for you this month: what you asked, and what came back. Rough is fine.

03 · A HOME CONNECTOR

A connector per tool. Skills per person. Memory per app. Nothing spans them.

This is every team using Claude or ChatGPT right now. So no agent can do this: ”Find the company in our CRM, pull our research note from the wiki, and draft the follow-up.”

03 · A HOME CONNECTOR

One connector the whole team adds. Four things behind it.

Skills

the firm's playbooks: how we write a memo, how we log a founder call

Context

thesis, portfolio, who's who, written once

Memory

what the agents learn, as plain files with full history

Tools

CRM, wiki, email, calendar, each with its own permissions

Who can read, who can write, what needs a human to approve: set once, for everyone.

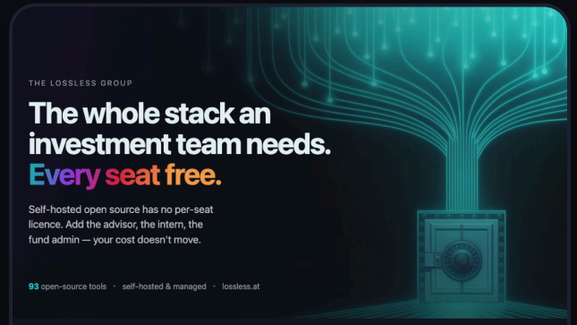
03 · A HOME CONNECTOR

Not a someday idea. Three firms run on one today.

✓ One connector per firm: Palmer AI, The Water Foundation and Lossless each add one connector, and Claude calls their Twenty, Outline and Plane through it, with shared skills.

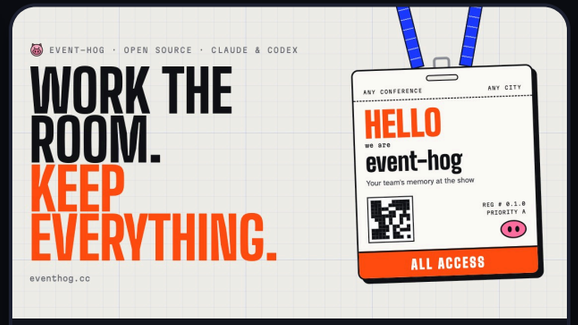
✓ Shared files: event-hog ran a three-person team's conference from Claude in October; every note became a saved change under its author's name.

→ Why it's easy now: it needs a version-controlled store (GitHub and GitLab work), and Cloudflare Artifacts makes it cheap and invisible: git repos for agents, next to the connector on Workers, and nobody sees GitHub.



lossless.at ↗

99 open-source tools mapped to what they replace, self-hosted for a firm and reached from Claude through one connector.



event-hog ↗

A connector that gives a team one shared notebook at a conference, inside Claude, ChatGPT, Cursor or Codex.

hope.ai ↗

An agent skill and templates that help a coaching cohort write goals they can keep and score them every week.

kay-os ↗

Personal agents, Hermes among them, working from one shared, version-controlled record. In design.

03 · A HOME CONNECTOR

Name the folders so the model knows there are rules.

context-v/
thesis, portfolio, people, plans

context-v/agent-skills/
shared skills, one SKILL.md each

docs-v/
documentation for people and agents

changelog-v/
dated notes on what changed

memory-v/
what the agents learn and save

"memory" and "docs" mean a hundred layouts in a model's training data. The -v is ours: it says this folder follows a pattern, so find it and keep to it. Not required; it's how we work.

03 · A HOME CONNECTOR

You don’t write it. You ask Claude Code or Codex for it.

```
Build me a home connector: a remote MCP server on Cloudflare
Workers that my team adds once in Claude and ChatGPT.
Behind it, a version-controlled repo (Cloudflare Artifacts,
or GitHub/GitLab): context-v/,
context-v/agent-skills/ (served as prompts), docs-v/,
changelog-v/, memory-v/. Every write is a commit under the
person's name; tools only add. Proxy our CRM and wiki through it
with stored credentials. Sign-in per person, a permission table
per folder and tool, and approval for sensitive actions.
```

The full prompt and recipe: fullstack-vc.com/guides/one-home-connector ↗. Start with the files, then add one tool at a time.

03 · GET STARTED THIS WEEK

Your first home connector in five steps.

01	Open Claude Code or Codex in the desktop app, in an empty folder. No terminal needed.
02	Paste the prompt from the recipe, and answer its questions as it builds.
03	Files first: have Claude save a note, then find it from a fresh chat.
04	Add your most-used tool, usually the CRM, read-only.
05	Invite one teammate, and give them the same connector.

Recipe and prompt: fullstack-vc.com/guides/one-home-connector ↗. Stuck? Bring it to a December session.

THANKS FOR BEING IN THE ROOM

Bring a story next time.

The replay goes up on the session page.
